Communication and presentation gained by being an instructor.

## Experience

### Have 1 year of experience in front-end development

Create responsive websites that allow the user to experience your website in the best and most appropriate way suited to the device they are using. By working using progressive enhancement, your website is delivered with a responsive layout that can best make use of the space available on the smallest to largest devices. Cross browser compatibility is ensured by using feature detection so older browsers still in use today provide a solid experience, whilst modern browsers can go the next step and enhance a user's time spent on your site.

## Have 2 years of experience in ui/ux design

Create all designs of companies with consideration to show the special character of your company and your private area and taking into account the required spaces and space to show your message by design in a fast and easy way.
